

Who can automate
tomorrow's
secondary packaging?

- Shelf-ready packaging
- Product protection
- Saving in packaging and quicker return on investment
- Products layered in the case

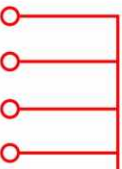

Your requirements

Who can fulfil your **Marketing/Logistic requirements?**

- RSC with or without pre-cuts
- Increasingly elaborate wrap-around blanks
- Shrink-wrapping with printed film
- Combinations of cardboard+film: tray+lid, flatboard+film, etc.

Your alternatives

Who can offer a **complete range** of end of line **solutions** whatever your **choice of packaging?**

Shelf-ready

- Quick implementation
- Splittable packaging or with pre-cut perforations
- Display function for improving visibility on the shelf

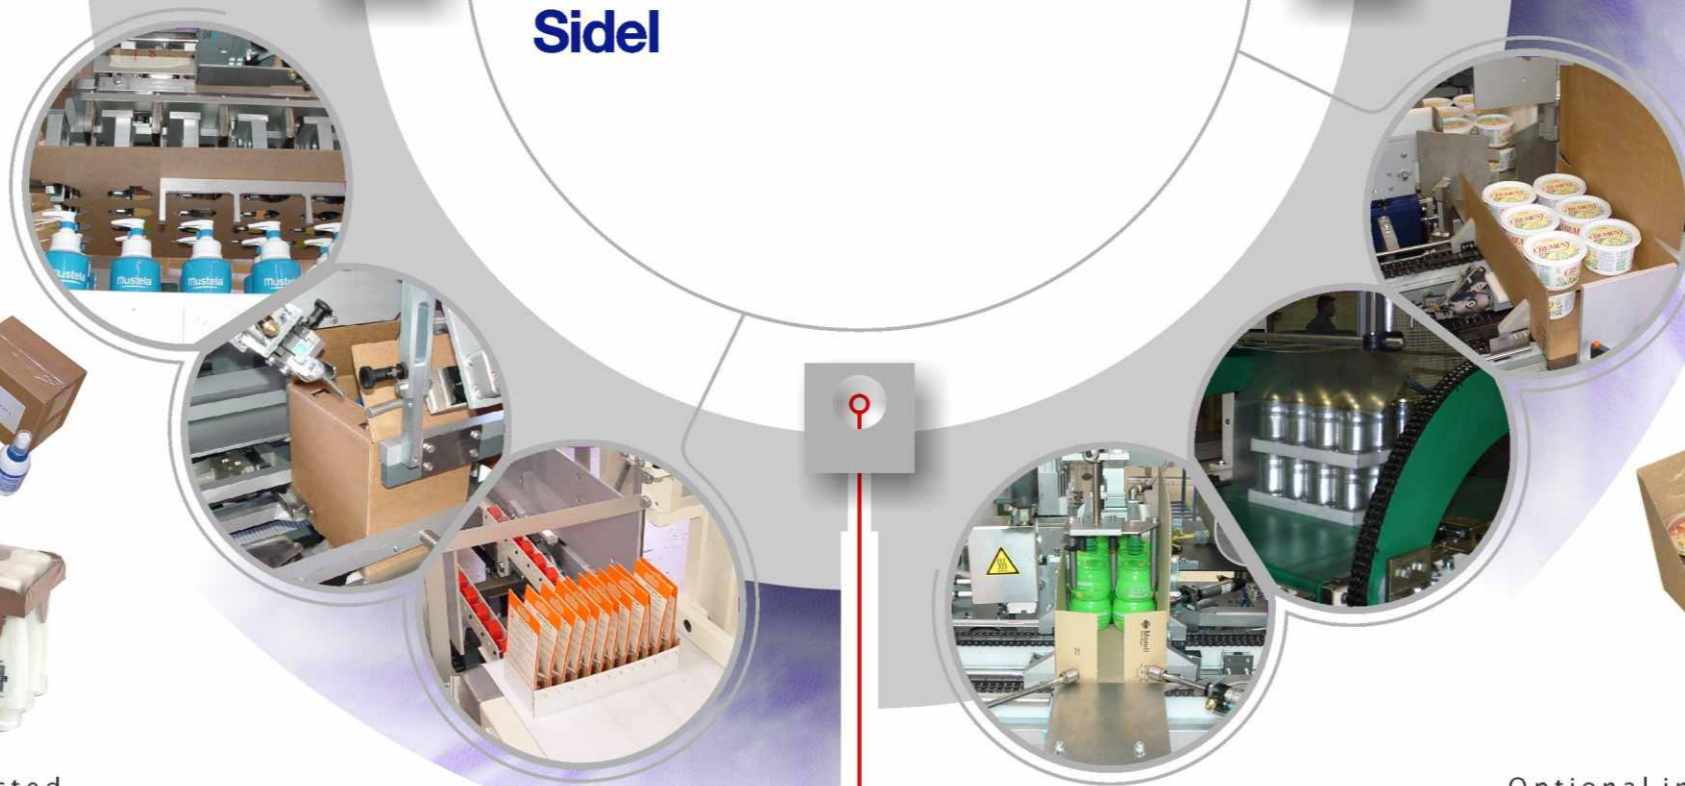

Saving in packaging

- Optimisation of packaging costs ('just enough')
- Front view of the product
- Product accessibility improved

- Primary packaging fully protected
- Stability of the product batch
- Secure transportation and dispatch

Product safety

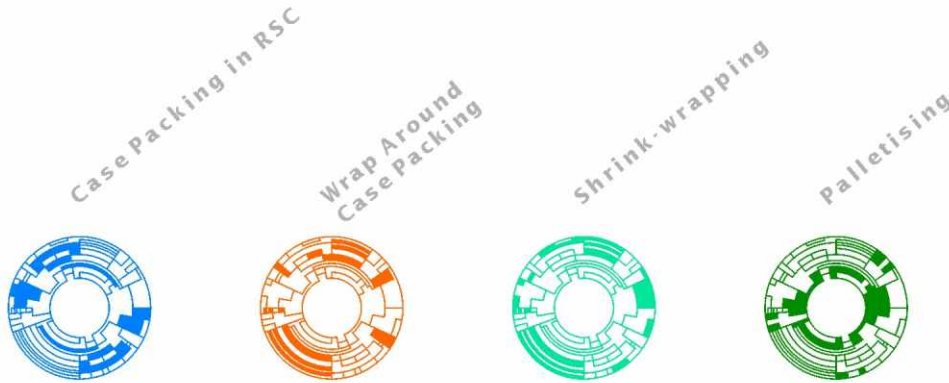

- Optional insertion of a card between layers
- Controlled operation at all speeds
- Layering before or after loading depending on the type of products

Product layering in the same packaging
